# Rendering LilyPond files white on black
for screen and projector use

Any objects with unspecified colour are printed according to `print-color`.

Here are samples of pure white along with other colours that may be more traditional, more pleasant or easier on the eye:

`"white"`

`"ivory"`

`"antiquewhite"`

`"navajowhite"`

The background color may also be adjusted through the paper variable `background-color`. Ideas:

`"black"`

`#(x11-color "gray20")`

`"midnightblue"`

`"darkslategray"`

Appendix 7 of the Notation Reference lists available colors.
